

PROINERT® RACKING ASSEMBLIES

DESCRIPTION

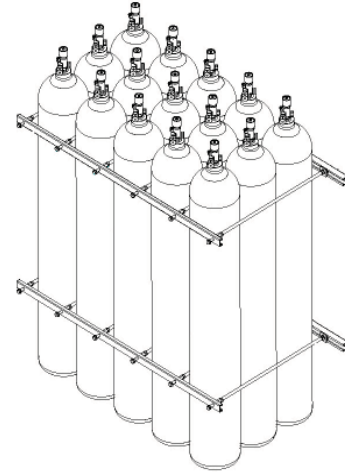

Cylinder racking assemblies are designed to support ProInert cylinders on multiple or main/reserve cylinder applications. Cylinder racking assemblies are available in single, double or triple row configurations. All necessary hardware and support material are supplied with each assembly.

INSTALLATION

Single, Double and Triple Row Rack Assemblies use Unistrut® as both the front and back supports together with clamp rod assemblies to secure the cylinders to any structurally solid surface. Reference the ProInert Design, Installation, and Maintenance Manual, P/N 06-371, for racking installation details.

SPECIFICATIONS

- Back and Front Support: Steel Unistrut construction with galvanized finish
- Clamp Rod Assembly: Steel-plated with plastic protective sleeve
